Hydrogen Station Acoustic Specification

The Hawaii Volcanoes National Park has specified an acoustic level for the hydrogen production, storage and dispensing system not to exceed 35 dba measured at a distance of 75 meters from the sound source. This is illustrated in Figure 1.

Figure 1: Hydrogen Production/Fueling Station Acoustic Specification

Proposal Due Date

14 August 2009.

Proposals to be postmarked not later than 14 August 2009.

This due date allows 16 working days for proposers to adjust their proposals to address the acoustic specification.
